

Wouldn't it be great to be able to modify your work or office space as often as you want to meet your constantly changing requirements? Well, now you have this option! MAiSPACE offers an innovative new way of organizing and re-organizing your office. Movable Walls developed by MAiSPACE allows you to adjust the size of your room, create smaller rooms, convert a set of smaller spaces into a larger room, the possibilities are endless....What's even better is that all of these rooms have perfect sound insulation. Every section of the workspace thus becomes a private office space which could be used for a variety of purposes, without interfering in any way with any other section. This helps create a group of mutually exclusive, independent, but yet interconnected private units to meet almost any structural or functional workspace need. Movable Walls, designed by MAiSPACE, let you restructure and reconfigure your office space everyday if required. It's like using the same space for different functions every day. And what's more, no permit hassles!

These walls combine utility with aesthetics and cost-effectiveness. They look like any other wall. A visitor to the office might not be able to distinguish a fixed wall from a movable one. MAiSPACE movable walls are made from the most stylish and durable materials. They are easy to clean and maintain, and they are free of germs. No more periodic renovation or redecoration required which would entail time AND money. No need to hire several workmen and technicians. Two people, without any technical knowhow, could set-up these walls with considerable ease. All that's required is a minimum set of tools. These walls are self-supporting.

Movable wall solutions provided by MAiSPACE are much more than mere room dividing screens. Our walls actually create rooms with perfect isolation and sound insulation. A wide range of materials is used for acoustic isolation. Panels are available with window elements and pass doors, which make the usage of the easier and more flexible. There is a wide range of colors to choose from. There are a variety of details to be used to make the panels look more powerful or elegant – all you have to do is make your selection. The panels are interchangeable and can be assembled to fit any current need. The wall panels provide the ability to swap or replace individual panels without disturbing adjacent panels. Two movable partitions may be placed at 90 degree angles to each other. Curved walls can be assembled using angled sections. We also offer fireproof movable walls. Movable walls can be installed fast with minimal dust, mess, or disruption; over carpet, after building finish-out, shortening the construction timeline overall. The installation is much faster because all of the components used to construct these modular walls have already been designed and fabricated at our manufacturing plant. Since there is no on-site fabrication there is less mess. This can be especially important in areas where dust and debris could interfere with sensitive company operations. Movable walls provide the ability to integrate electrical, data and communications requirements while still providing flexibility, ease of reconfiguration and a superior finished and functional product. Power and data cables can be routed through movable walls panel interior with standard outlets installed at any height on the panel surface, integrate modular power components through the wall panels or panel connectors.

Movable walls offer sustainable, environment friendly solutions to your space organization needs. These walls offer benefit to the long term life span of the building. Each time you need to move around walls or add, it saves on materials, labor and protects our environment by not sending unusable materials to the local land fill. This helps in efficient management of material, water, energy resources and waste.

Our planning and design team can help you to choose the right wall type from the wide range of our models to meet your needs. Operable and folding walls are planned and measured for every project according to its requirements.

Movable Walls from MAiSPACE ... just another prime example of innovation, leading edge ideas and technology to address the office needs of the 21<sup>st</sup> century.
