

MAiSPACE, leading office cubicle manufacturer and provider of innovative space planning and utilization tools and design services, has proudly served the state of California for more than 15 years. We offer a full range of quality, easy-to-install-and-reconfigure office cubicles to help companies quickly and easily find the right workspace solution at the right price.

When Monarch Health outgrew its existing space in Technology Park in Irvine California it decided to lease an additional 24,000 square feet in the same development. "We didn't want to risk losing any employees with the move and the Park's central location with close proximity to Interstates 5 and 405 has worked well for us," according to Tom Wilshart, Office Administrator for Monarch Health.

"My years of experience have taught me that moving a company can be very disruptive and we wanted to do everything possible to minimize the disruptions for the company and our employees. It can also be very costly, especially with the rising cost of real estate and construction in Southern California, so staying within a strict budget was also important." The project was competitively bid and MAiSPACE won the business hands down as the leading office furniture manufacturer and supplier. Their MOrSPACE frame and tile system offered the features we wanted for about the same price as the other lower quality monolithic systems. I'm able to report that our employees are very happy in their new digs "says Wilshart.

Whether you are located in Irvine, San Jose or Sacramento, office cubicles provided by MAiSPACE are versatile enough to meet your changing everyday needs. One of the great assets of our office cubicles is their adaptability. If you expect your business to grow or move, you can plan to use modular furniture that could be expanded or contracted when your need for office space and storage increases or decreases. As your needs evolve, you can change your modular office furniture to keep up with these specific needs. These office cubicles can also be adapted if your business stays the same size, but your focus changes. Redesigning the workspace is made very easy and quick by modular furniture solutions developed by MAiSPACE. As well as being built to last, MAiSPACE office cubicles are perfectly capable of growing and changing with your business. Our cutting-edge innovative design provides flexibility, convenience, comfort and ergonomic advantages. It is our constant endeavor to make work time as pleasurable for you as it should be.

The most important purposes of office cubicles are to provide isolation, noise reduction and economic storage options. It is important to achieve a level of isolation for employees to be able to function better and to reduce distraction by other things going on in a busy workplace. Office cubicles provided by MAiSPACE help reduce noise greatly, especially through leading-edge design elements. This is an important benefit, in an organization of any size. The constant noise level in this kind of environment can be distracting, and even, in the long term, stressful for employees. Thus, it is imperative on the part of management to try to reduce noise levels in the office. In addition, special acoustic panels or screens developed by MAiSPACE help further reduce noise levels in

the office by preventing sound from traveling between adjacent or nearby office cubicles. MAiSPACE also provides transparent partitions which are fitted above the acoustic panels. These partitions also help natural light to permeate through the workspace, further enhancing wellbeing of employees. This unique office cubicle design makes it possible for employees to work noise-free and without distractions that would occur in a totally open environment. Our cubicle design provides a combination of easy access to colleagues with the added advantage of privacy whenever required. In this way, the cubicle creates a very beneficial compromise between the need for privacy to be able to focus on their work and the need to socialize and enjoy the company of fellow employees as appropriate.

Another major consideration for twenty-first century workspaces is the ergonomic dimension. MAiSPACE fully understands the comfort needs of employees who function in a fast-paced, modern work environment. The field of ergonomics was developed with the express aim of improving the productivity, health, safety and comfort of employees, as well as promoting effective interaction among people, technology and the environment in which they need to operate. Our ergonomic design aims to facilitate task performance, minimize fatigue and injury by fitting equipment to the body size, strength and range of motion of the user. This helps in minimizing workers' compensation claims. MAiSPACE provides unique revolutionary designs which consist of adjustable components that enable the user to modify the cubicle to fit their specific physical and job-oriented requirements. It is our commitment to develop workspace solutions with the all important goals of reducing pain and injury, increasing productivity, improving morale, and making the at-work experience as pleasurable as can be for employees and executives.
